DETAILED ACTION

This office action is in response to the applicant's amendment dated 5/8/2008.

The applicant cancelled claims 9-14.

The applicant amended claims 1 and 3-8.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kerry Sisselman on 5/27/2008.

The application has been amended as follows:

The examiner notes that although the applicant has changed the content of claim 1 in the Amendment submitted 5/8/2008, the status of the claim was submitted as "original". The examiner therefore, in an agreement with the applicant's representative, Kerry Sisselman, stipulates and submits an amendment to claim 1 which states that the claim is "currently amended".

Claim 1 (~~original~~ currently amended) : A method for checking the refresh function of a memory having a refresh device, which comprises
determining if refresh request pulses are being produced on the memory and at what intervals of time the refresh request pulses are being produced on the memory by detecting the refresh request pulses at a pad;

Art Unit: 2117

supplying refresh test pulses produced outside the memory using a freely cycling external oscillator and an external counter to a control unit of the memory, via a multiplex device, ~~with refresh test pulses produced outside the memory~~ the refresh test pulses being supplied to the control unit instead of ~~supplying the control unit with the refresh request~~ pulses, the multiplex device being controlled by a test signal; and

checking the refresh device of the memory utilizing the refresh test pulses.

Response to Amendment

2. In view of the applicant's amendments and cancelled claims, and the examiner's amendment (above), all objections and rejections of the remaining claims 1-8 are withdrawn.

Allowable Subject Matter

Claims 1-8 are allowed. The following is an examiner's statement of reasons for allowance: As per independent claim 1, Tanazaki and Kang teach a method for checking the refresh function of a memory having a refresh device comprising supplying a control unit of the memory with refresh test pulses produced outside the memory instead of supplying the control unit with the refresh request pulses, and checking the refresh device of the memory utilizing the refresh test pulses, and further discloses determining if refresh request pulses are being produced on the memory and at what intervals of time the refresh request pulses are being produced on the memory. But the references have failed to further provide support or disclosure of the unique feature as claimed by the applicant in the claim, wherein the external refresh test pulses are driven

by an oscillator and counter via a test signal controlled multiplex device. Therefore, independent claims 1, as well as dependent claims 2-8, are each allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
